ABOUT US

| Our Story |

Vitrosens Biotechnology Inc., founded in Türkiye, has brought together R&D, production, and sales, since our establishment, to provide and develop accurate, game-changing in vitro diagnostic solutions. The company is a leading diagnostics firm committed to advancing science and improving the world through innovative technologies and groundbreaking research.

Our company operates the largest rapid test kit facility in Türkiye, and our manufacturing processes are carried out under ISO 13485: 2016 compliant quality systems. Our quality management systems have a Medical Device Single Audit Program (MDSAP) standards. The company's success is founded on our expertise in molecular biology, genetics, in-vitro-diagnostic (IVD), and point-of-care testing (POCT).

| Quality Standards |

The Medical Device Single Audit Program enables an Auditing Organization recognized by MDSAP to perform a sole regulatory audit for a medical device manufacturer, meeting the applicable requirements of the regulatory authorities involved in the program.

| Polymerase Chain Reaction Systems |

The PCR Instruments are a specialized laboratory device used for quantitative polymerase chain reaction (qPCR). It is designed for real-time PCR, which allows for the monitoring and quantification of DNA amplification as it occurs during the reaction. The instruments are a valuable tool in various fields, including molecular biology, genetics, microbiology, and medical research.

- Improved optical system for high specificity and sensitive detection.
- Reduced operating time.
- Power-off protection. Avoid the loss of experimental data and waste of reagents due to abrupt power-off.
- High sample throughput in diagnostic lab applications.

Real-Time Fluorescence Quantitative PCR Instrument

The Real-Time Fluorescence Quantitative PCR Instrument is a portable real-time quantitative PCR system with 16 sample capabilities designed for PCR detection.

| Performance Parameters |

REF No.	NGX16-4F
Detection Throughput	16 well
Fluorescence Channel	4 Channels
Applicable Probes/Fuels	Channel 1: FAM, SYBR Green I, SYTO 9, Eva Green, LC Green; Channel 2: HEX, VIC, TET, JOE Channel 3: ROX, Texas Red ; Channel 4: CY5
Light Source	High-Brightness, Long-Life, Maintenance-Free LEDs
Applicable Consumables	0.2 ml Transparent Single Tube and 8 Consecutive Tubes
Average Rate Of Warming	5.5°C/s
Average Cooling Rate	4.5°C/s
Temperature Uniformity	±0.3°C
Temperature Accuracy	±0.1°C
Hot Lid Temperature Range	Room Temperature ~105°C
Fluorescence Repeatability	CV≤3%
Sample Repeatability	CV≤3%
Fluorescence Linearity	The linear regression coefficient $r \geq 0.990$
Sample Linearity	The linear regression coefficient $r \geq 0.980$
Software Analysis Capabilities	It can support qualitative, relative quantitative, absolute quantitative, dissolution curve and other analysis
Open Mode	Support reagent open and reagent closed (achieved by swiping card) two modes
Display Screen	7-inch Full-color High-definition LCD Capacitive Screen
Report Printing	1. USB, cloud or computer report management software
Connection	Wired, Wireless WiFi
Power-Off Protection	Instantaneous power-off protection to continue running unfinished experiments after instrument restart
Size	214mm(W) * 203mm(L) * 168mm(H)
Weight	5kg
Features:	• Simplicity, • Precise, • Cloud connectivity, • Reagent blocking

PCR KITS

PCR Kits

The ChainFor™ PCR Kits are a set of reagents, enzymes, and buffers designed for conducting the polymerase chain reaction (PCR). The ChainFor™ PCR Kit is provided in an easy-to-use Master and Oligomix format. ChainFor™ PCR Master Mix and Oligomix contain preoptimized concentrations of DNA Polymerase and MgCl₂, plus dNTPs and an innovative PCR buffer specially developed for PCR. The kit enables success in monoplex, multiplex, and Panel PCR. There is no need to optimize reaction conditions (e.g., the concentrations of primers, Mg²⁺, and Taq DNA polymerase) and cycling parameters due to unique preoptimized reagents included in the kit.

LyoSens™

Lyophilized PCR Kits

Lyophilized PCR kits are a type of molecular biology product used for polymerase chain reaction amplification of DNA. These kits contain the necessary reagents, enzymes, and buffers for performing PCR, but the components are stabilized through lyophilization, which involves freezing the reagents and then removing the frozen solvent (usually water) under reduced pressure, leaving behind a dry and stable product.

Advantages

- Long Shelf Life
- Room Temperature Storage
- Reduced Risk of Contamination
- Instant Reagent Availability
- Space and Weight Efficiency
- Ease of Use

0.2 ml Single Flat Cap
PCR Tube Format

0.2 ml 8-Strip Format

GASTROENTERITIS PATHOGENS

| Gastroenteritis ID-23 Genotyping qPCR Kit |

The Gastroenteritis ID-23 Genotyping qPCR Kit is a diagnostic tool for detecting and genotyping various gastroenteritis-causing agents (viruses, bacteria, and parasites) from rectal or stool swab samples. It employs Real-Time PCR technology to simultaneously identify up to 23 different targets, including a human genome control and uses multiple fluorescent channels for detection.

Target	Oligomix 1	Oligomix 2	Oligomix 3	Oligomix 4	Oligomix 5	Oligomix 6	Oligomix 7

RESPIRATORY PATHOGENS

| Respiratory ID-28 Genotyping qPCR Kit |

The Respiratory Infection ID-28 Genotyping qPCR Kit is a diagnostic tool for detecting and genotyping various respiratory agents (viruses and bacteria) from various respiratory sample types. It uses Real-Time PCR technology to simultaneously identify up to 28 different targets, including a human genome control and employs multiple fluorescent channels for detection. The intended use and product description are quite similar to the gastroenteritis kit but are tailored to respiratory infections.

SEXUALLY TRANSMITTED INFECTION PATHOGENS

| STI ID-12 Genotyping qPCR Kit |

The STI ID-12 Genotyping qPCR Kit is a diagnostic tool designed for the qualitative detection of sexually transmitted infections (STIs) caused by viral and bacterial pathogens. It utilizes Real-Time PCR technology, which provides rapid and sensitive results in 4 tubes for the detection of up to 12 different STI pathogens. This kit is intended for in vitro diagnosis and can be applied to samples obtained from genital swabs, genital fluids, and biopsies. The presence of at least one positive result for a target on the STI pathogens' genome is indicated for diagnosis. In areas where STI pathogens are prevalent, multiple discriminating targets can be used for diagnosis. The kit also includes an internal control targeting the RNase P gene in the human genome to ensure test quality and reliability. It uses different fluorescent channels (FAM, ROX, Cy5, HEX) for specific target identification.

Target	Oligomix 1	Oligomix 2	Oligomix 3	Oligomix 4

BLOOD PATHOGENS

| Parvovirus B19 qPCR Kit |

The Parvovirus B19 Detection qPCR Kit is a diagnostic tool designed for the qualitative detection of human parvovirus B19 specific DNA. Human parvovirus B19, sometimes referred to as erythrovirus B19 or B19 virus. The kit is intended for in vitro diagnosis and is applied to nucleic acid isolates obtained from whole blood. Parvovirus B19 is most known for causing disease in the pediatric population; however, it can also affect adults. It is the classic cause of the childhood rash called fifth disease or erythema infectiosum, or “slapped cheek syndrome.”

All products are available in both lyophilized and liquid forms.

ANTIBIOTIC RESISTANCE

| ABR ID-23 qPCR Genotyping Kit |

ABR ID-23 Genotyping qPCR Kit is a specialized tool used to identify the presence of antibiotic-resistant genes in bacterial samples. This technology utilizes the polymerase chain reaction (PCR) method, which amplifies specific DNA sequences, making it easier to study them in detail. By targeting genes known to confer resistance to antibiotics, the kit can quickly and accurately determine whether a bacterial strain has the potential to withstand certain antibiotics. This is crucial for guiding treatment decisions and managing antibiotic use effectively. The kit typically includes all necessary reagents and instructions for conducting the PCR, and it is designed for use in both clinical and research settings to help curb the spread of antibiotic-resistant infections.

CENTRAL NERVOUS SYSTEM (CNS) PATHOGENS

| Bacterial Meningitis Panel Genotyping qPCR Kit |

The Bacterial Meningitis Panel Genotyping qPCR Kit is a diagnostic tool designed for the qualitative detection of infections related to the central nervous system (CNS). It utilizes Real-Time PCR technology for rapid and sensitive results. This kit can simultaneously identify up to 7 different targets, including bacterial and fungal agents associated with these infections. The kit is intended for in vitro diagnosis and is used with nucleic acid isolates obtained from cerebrospinal fluid and blood samples. An internal control targeting the RNase P gene in the human genome is included to ensure the quality and reliability of the test. Multiple fluorescent channels (FAM, ROX, Cy5, HEX) are used for specific target identification, enhancing the accuracy of the diagnosis.

URINARY TRACT INFECTION (UTI) PATHOGENS

| UTI ID-27 Genotyping qPCR Kit |

The Urinary Tract Infection ID-27 Genotyping qPCR Kit is a diagnostic tool designed for the qualitative detection of urinary tract infections (UTIs). This kit is intended for in vitro diagnosis and is used to identify a range of pathogens associated with UTIs, including bacterial agents, and fungal agents. It is applied to nucleic acid isolates obtained from urine samples.

All products are available in both lyophilized and liquid forms.

Target	Oligomix 1	Oligomix 2	Oligomix 3	Oligomix 4	Oligomix 5	Oligomix 6	Oligomix 7	Oligomix 8
<i>Staphylococcus aureus</i>	FAM							
<i>Acinetobacter baumannii</i>	ROX							
<i>Klebsiella pneumoniae</i>	CY5							
RNase P (Internal Control)	HEX							
<i>Staphylococcus saprophyticus</i>		HEX						
<i>Candida parapsilosis</i>		ROX						
<i>Aerococcus urinae</i>		CY5						
<i>Pseudomonas aeruginosa</i>			FAM					
<i>Enterococcus faecalis</i>			HEX					
<i>Enterococcus faecium</i>			CY5					
<i>Providencia stuartii</i>			ROX					
<i>Treponema pallidum</i>				FAM				
<i>Ureaplasma urealyticum</i>				CY5				
<i>Proteus vulgaris</i>				ROX				
<i>Candida glabrata</i>					FAM			
<i>Serratia marcescens</i>					HEX			
<i>Proteus mirabilis</i>					CY5

TROPICAL PATHOGENS

| Dengue qPCR Kit |

The Dengue Virus Detection qPCR Kit is a powerful diagnostic tool designed to detect the presence of the dengue virus with precision and speed. Utilizing quantitative PCR (qPCR) technology, this kit allows for the accurate identification and quantification of the dengue virus in biological samples. Dengue virus infections, transmitted through mosquito bites, can vary in severity, making early detection crucial for effective patient management. With this kit, healthcare professionals can swiftly and confidently diagnose dengue infections, enabling timely treatment and surveillance in regions prone to dengue outbreaks.

MAGNETIC BEAD-BASED SYSTEM

A Magnetic Bead-Based System is a technology or method used in various fields, particularly in the fields of molecular biology, genomics, proteomics, and diagnostics. It involves the use of tiny magnetic beads (typically nanoparticles coated with a substance that binds to specific molecules) to capture, separate, purify, or manipulate specific molecules such as DNA, RNA, proteins, or other biomolecules.

Advantages

- High Specificity
- Reduced Contamination
- Wide Applicability
- Minimal Sample Loss
- Cost-Effective

AUTOMATED NUCLEIC ACID EXTRACTION SYSTEMS

MagPro

CE IVDR

The MagPro™ devices are a fully automated Nucleic Acid Extraction System that uses a magnetic bead-based, single cartridge, and 96 well plate format to allow simultaneous extraction of samples. The magnetic beads and buffer reagents in the kit help to separate and purify high-quality nucleic acids from a variety of clinical sample sources like blood, viruses, body fluids, etc.

The principle is based upon the affinity of magnetic beads to bind to the nucleic acids at a particular pH, thus allowing easy binding and release of the nucleic acids based on the pH conditions of the buffer. The system is designed for faster isolation of purified nucleic acids.

| Magnetic Bead-Based Automated NA Extraction System – MGX-2 |

| Performance Parameters |

REF No	MGX-2
Indication	In vitro diagnostic medical device
Intended user	For professional use in laboratories with trained staff
Capacity	1–2 samples / single extraction process
Specimen types	Whole blood, CSF, plasma, serum, urine, BAL, swab
Extraction principle	Fully automated magnetic separation
Sample volume	200 µl
Elution volume	150 µl
Processing time (F/S)	15 - 25 Minutes
Decontamination	UV- Lamp
Dimension	17 X 23 X 20 cm
Weight	3.5 Kg
Power supply	220V–240V 50/60Hz

| Magnetic Bead-Based Automated NA Extraction System – MGX-16 |

The MagPro™ Systems performs fully automated purification of nucleic acids using magnetic beads for up to **16** samples capabilities. Automated steps include binding of nucleic acids to magnetic beads, washing, and elution of nucleic acids.

The protocol provides all the necessary instructions for the MagPro™ to carry out automated nucleic acid purification. The transfer of samples into the different reagents and the separation of the nucleic acid from magnetic beads is performed by the magnetic rows to ensure excellent reproducibility and minimize the handling time required for the extraction of the nucleic acids.

| Performance Parameters |

REF No	MGX-16
Indication	In vitro diagnostic medical device
Intended user	For professional use in laboratories with trained staff
Capacity	16 Samples
Specimen types	Whole blood, CSF, plasma, serum, urine, BAL, swab
Extraction principle	Fully automated magnetic separation
Sample volume	200 µl
Elution volume	100 µl
Processing time (F/S)	15 - 25 Minutes
Decontamination	UV- Lamp
Dimension	320 × 227 × 332 mm
Weight	12.8 Kg
Power supply	220V–240V 50/60Hz

| Magnetic Bead-Based Automated NA Extraction System - MGX-32 |

The MGX-32 Automatic Nucleic Acid Purification System is a high-throughput, fully automated solution designed for efficient and reliable nucleic acid extraction. Utilizing advanced magnetic bead separation technology, it ensures consistent and contamination-free purification of DNA and RNA from diverse sample types.

Ideal for clinical diagnostics, research laboratories, and high-demand molecular workflows, the MGX-32 enhances productivity while maintaining exceptional accuracy and reproducibility.

| Performance Parameters |

REF No	MGX-32
Indication	In vitro diagnostic medical device
Intended user	For professional use in laboratories with trained staff

Sample volume	200 µl
Elution volume	100 µl
Processing time (F/S)	15 - 25 Minutes
Decontamination	UV- Lamp
Dimension	420 × 400 × 480 mm
Weight	33 Kg
Power supply	220V–240V 50/60Hz

MAGNETIC BEAD BASED NUCLEIC ACID EXTRACTION KITS

MagFast

The MagFast Nucleic Acid Purification Kits are designed for the rapid isolation of nucleic acids (DNA, RNA) from viruses, bacteria, and yeast, fungi in biofluid and transport media samples. You can use the nucleic acid purified in this kit in a broad range of molecular biology downstream applications, such as sequencing and qPCR. This kits are valid for these Automated Nucleic Acid Extraction Systems.

Advantages

- Enhanced sample throughput capability
- Generation of high yields of nucleic acid
- Isolation of pure, high-quality nucleic acid
- Attainment of a Nucleic Acid 260/280 Ratio within the range of 1.8 - 1.9

SPIN COLUMN EXTRACTION

Spin column extraction is a molecular biology technique for isolating and purifying DNA, RNA, or proteins. It involves binding target molecules to a column, washing away contaminants, and eluting the purified molecules through centrifugation, resulting in high-quality, isolated material.

ViraSens

| Viral DNA Purification Kit | CE IVDR

Viral DNA Purification Kit is designed for the purification of Viral DNA from cell-free samples such as body fluids, serum, plasma, and supernatant of virally infected cell cultures. The viral DNA obtained can be used directly for various procedures such as RT-PCR, Cloning, RFLP analysis, sequencing, qPCR, viral load determination, viral genotyping, and detection of viruses.

Advantages

- No toxic reagents
- No steps involving phenol/chloroform extraction or alcohol precipitation
- Simple, quick, efficient, and widely accepted spin-column method
- Excellent sensitivity and consistent performance
- Suitable for further testing such as real-time PCR

UNIVERSAL MEDIUMS

VTFOR

| Universal Medium Series |

CE IVDR

Reliable Sample Collection, Stabilization, and Transport – All in One Solution

The **VTFOR™ Universal Medium Series** is designed to ensure the safe collection, transport, and preservation of clinical samples containing viruses, bacteria, fungus, protozoas and nucleic acids. This comprehensive product line includes **Viral Transport Medium (VTM)**, **Universal Transport Medium (UTM)**, and **Nucleic Acid Transport (NAT) Medium**, providing flexible solutions tailored to a wide range of diagnostic workflows.

Engineered for performance and convenience, VTFOR™ products maintain sample integrity from collection to analysis, making them ideal for molecular diagnostics, including PCR-based applications.

Advantages

- **Ready-to-use format** for immediate sample collection
- **Optimized formulations** for viability of pathogens and nucleic acid stability
- **Broad compatibility** with nasopharyngeal, oropharyngeal, STIs and HPV swab samples
- **Enhanced contamination control** through advanced formulation and sterile design
- **Maintains sample integrity** over extended transport periods
- **Flexible storage conditions (2°C – 25°C)** for ease of logistics
- **Durable tubes:** crack-resistant, leak-proof, and stand-up design
- **Fully compatible** with downstream molecular assays such as PCR and RT-PCR

DNA & RNA Stabilization

Specially formulated medium inhibits DNase and RNase activity, preserving nucleic acids from viruses and microorganisms.

Optimized Sample

Ensure efficient sample collection and release from the swab, maximizing viability of the viruses, bacteria, fungi, protozoa and stability of nucleic acid for downstream applications

Safe Sample Handling

Stabilizes sample and reduces degradation, ensuring reliable transport and processing of specimens.

Compatible with Molecular Assays

Validated for use with PCR, RT-PCR, and other nucleic acid amplification platforms, including automated systems.

Viral Transport Medium

REF NO: VTF01

Model	VTF012	VTF013		
Filling	2 mL	3 mL		
Description	12x80 mm tube filled with VTF01 VTM Medium			
Kit Size	100
